

Element Fire Pit

Technical Specifications

Tait.

UPDATED - 01.12.24

The Element Fire Pit designed by Adam Goodrum and made by Tait is a stylish modern fire pit that makes a striking, architectural-inspired statement.

- 4mm-thick mild steel with a black oxide finish

Constructed of three interlocking blades of cantilevered mild steel with a blackened, matte finish and a sculptural profile, Element is a new icon set to enhance any outdoor space and complement your outdoor scenario, even when not in use.

The Element Fire Pit is esteemed by architects and designers alike for its ability to speak to a wide range of residential and commercial contexts. As it is exposed to direct fire, Element will continually mature and its coating weather to give a unique rusted patina.

Carefully considered, Element can be easily disassembled and compactly stored.

The Element Fire Pit affords the assurance of authentic Australian design, genuine local manufacture using sustainable methodologies, quality craftsmanship underscored by a manufacturer guarantee and product longevity.

All Tait pieces are made locally and come with a 5-year warranty.

Tait's original designs are protected under design registration and copyright.

How to care for your Element Fire Pit

GENERAL CARE

At Tait, we make products for life. Our products are crafted from high-performance materials designed to withstand the elements across our diverse Australian climate zones. We make design decisions with both form and function in mind, combining timeless and cutting-edge designs with beautiful finishes in order to elevate your outdoor (or indoor) experience.

Our collections are handcrafted from weather-resistant materials, making each piece a durable choice. In order to maintain their look and feel over time, Tait items need ongoing care and maintenance. The frequency of maintenance will vary depending on the level of care you want to provide, your personal standards and requirements as well as the environment within which the product lives.

Please refer to the care instructions relevant to the specific materials and finishes of your product, and take note of the warranty details to understand the parameters.

We finish making our products by hand, and know they can live a long and useful life when equally cared for in your hands. For those rare occasions where it's needed, we offer a 5-year structural warranty (Australia only), made possible by the stringent quality control standards within our factory on Wurundjeri Land in Thomastown, Victoria.

The warranty does not cover:

- Damage from mishandling, mistreatment, abuse or lack of maintenance.
- Natural ageing, general wear and tear and fading.
- Damage from organic or man-made matter including mineral deposits, soils and fertilisers; or from the build-up of environmental mould.
- Corrosion spots at the weld joints (which do not affect the structural integrity of the product and are a natural outcome of the material used).
- Corrosion of steel furniture and parts as a result of hard seafront or chlorinated environments.
- Any variations in colour, shade or gloss levels of finishes including stone tops and timbers.
- Changes of heart based on personal preference.
- Transportation costs for replacement parts/products, or labour costs for repair (these are charged at our discretion)
Goods that have been held in storage for any period (due to the potential impact of environmental extremities in certain storage facilities).

The above Tait warranty terms are accepted by the customer and end-user upon order and supply.

FIREPIT

CARE & MAINTENANCE

A striking, architectural-inspired fire pit constructed of three interlocking blades of cantilevered mild steel, with a blackened, matte finish and a sculptural profile. As exposed to direct fire, Element will continually mature and its coating weather to give a unique rusted finish. Carefully considered, Element can be easily disassembled and compactly stored when not in use.

ENJOYING YOUR FIRE PIT SAFELY

- Keep an eye on children whenever a fire pit is being used. Don't allow them to get close to the fire pit surface or the blaze.
- Do not leave a lit fire pit unattended.
- Keep a bucket of sand, water or garden hose close-by to deal with wayward sparks, burning embers or flare-ups.
- If a spark or burning ember lands on a timber deck or ground surface, extinguish it immediately as they can damage surfaces.

FIRE PIT PLACEMENT

- Keep fires located at least 3 - 6 meters away from structures and objects. Never operate the fire pit a fully or partially enclosed space, beneath a building overhang or overhanging tree's. Check with the local council and observe the correct distance required by law.
- For multi-residential dwellings please adhere to fire regulations provided by your body corporate.
- Clear away any debris buildup from the surrounding area. In fire-prone areas, surround the fire pit with non-combustible materials, like crushed stone or brick.
- Ensure the ground is level.
- Only install a fire pit on a fire-resistant, protective surface. We recommend pavers, bricks, sand or a fire pit pad designed to protect surfaces from temperatures as high as 760 C° (1400 F°). The protective heat pad should extend at least 60cm's beyond the fire pit in all directions. Please note, burning embers can shoot beyond the protective surface and burn the deck or exterior ground surface.
- If installing on an elevated structure (i.e. deck), ensure the weight of the fire pit and protective surface can be supported.

WARRANTY

Remember:

- Before lighting an outdoor fire in the fire pit, check the weather forecast and ensure that weather conditions are suitable. Avoid lighting a fire in windy conditions which can blow embers.
- DO NOT light a fire pit on a Total Fire Ban Day, it is illegal. Ensure that you check conditions and regulations in your area.
- Only burn wood that has been seasoned for at least six months. Softwoods, like pine, tend to produce more crackles and sparks than seasoned hardwoods.
- Avoid burning construction materials, such as plywood or composite woods, which can release toxic fumes when burned.
- NEVER start a fire with lighter fluid, petrol or accelerants.

How to care for your Element Fire Pit

Tait.

EXTINGUISHING THE FIRE

- Spread coals over the larger surface area of the fire pit to let them cool down.
- DO NOT throw water on the embers or use a high-pressure hose. Set the hose nozzle to "spray." A shower-type spray douses a flare-up, a more direct stream of water can spread sparks. Embers may spit, burn or spread sparks.
- Ensure the fire is completely extinguished before leaving the area.

Your Element Firepit comes with a Black Oxide finish, This finish will deteriorate with first use and the metal will start to corrode and flake. This is normal for any firepit and is not covered by Tait warranty.
